

Project Plan

Personal Development, Professional and Sportingly

Overview

Project Name: Learning Angular

Target Date: Aug 5, 2024

Day	Goal
Monday	Learn 2 properties
Tuesday	Watch a video about making functional components
Wednesday	Watch 3 news about Angular
Thursday	Create or improve the project's two functional components
Friday	Prepare for the next week in Github

The Primary Objective

Objective	Success Metrics
To be able to undertake any web project in any field.	Implementing Push Notifications.
	Background Sync.
	Offline access.
	Ionic (Mobile Apps).
	Electron (Desktop Apps).
	Server-Side Rendering (SSR).
	Create APIs.

Timeline and Tasks

The Roadmap

	Month 1	Month 2	Month 3	Month 4
Phase 1 Design patterns (Lazy Loading, Change Detection, AOT)	Database and solid Structure.			
	Design Patterns, services, components and RouterLinks, Inheritance, Injects, Element Schemas, custom Elements.			
		Component children with queries (@ViewChild), DOM APIs.		
Phase 2 UX/UI (Tailwind CSS, Animations, Accessibility)	Choose a framework CSS, Palette colors.			
		WCAG to API.		
		Merge Frontend and Backend with services and testing.		
Phase 3 Testing and Security (Jasmine y Karma, E2E, Linting)			OAuth, JWT, Firebase Authentication.	
		DOCUMENTATION CODE AND CREATE A REPOSITORY IN GITHUB. Croos-Site, Scripting, Croos-Site Request Forgery for good maintain and scalability.		
				Google Analytics or Azure Application Insights.
Phase 4 DevOps Deployment (Travis CI, Jenkins)				GitHub Actions, Travis CI, or Jenkins.

Notes

- Define clear requirements and make a design pattern.
- Agile development with Scrum or Kanban, create re-utilizable components.
- Testings and code documentation.
- Automated Deployment and Feedback.
